

MOM for week 6

Editing a module, for each course, and changes in the following.

Should implement a drop down list, for the functions of update, delete

Updation and deletion should be done on many attributes. - course name, course image, course description.

A search option implementation, for searching a module in a course.

Implementing a complete new page, for linking everything with each other.

Rules table implementation

Analyzing the performance with each skill topic and find out where he is not able to proceed further.

Rules table content :

What is the accuracy rate?

What is the general level of questions to promote the user?

What should be the mix of questions that must be in an exam?

Deploying our work in an AWS server.

Collaborating with other team to work together, to start pushing the code from now - Decision to be decided by Sunday.

Sharing the the database schema picture.

Brain storming on how to implement the rules table for the UI to access.

Need to get inputs regarding how to analyze the further phase in our project. Like sample data and etc
